mammalian physiology such as morphogenesis of immune system function. The invention particularly relates to nucleic acids, proteins and antibodies which regulate development and/or the immune system. The invention also relates to antibody fragments which specifically bind to antigenic fragments of a primate interleukin (II)-1 receptor like molecules such as II-1 receptor DNAX designation (II-1RD). The antibody fragments of the invention are useful to treat conditions exhibiting abnormal expression of the receptors or their ligands which typically will be immunological disorders. The present sequence is a DNA encoding Disclosure; Antibody fragments which specifically bind to primate interleukin receptor-like molecules are useful to treat conditions associated abnormal expression of the receptor or its ligand, particularly immunological disorders -The present invention relates to compositions Column 11-16; 102pp; English. and methods for affecting with

                                                                                                                                                                                                                                                                                                                                                            TIGIRR polypeptide counter-structures; (v) as molecular weight markers electrophoresis; (vi) for determining isoelectric points of unknown proteins; (vii) as controls for determining the extent of protein fragmentation (e.g. to aid characterisation of protein structures by maspectrometry); (viii) for generation of antibodies (Ab); and (ix) to deliver diagnostic or therapeutic agents to cells that express TIGIRR, binding molecules. Ab are used for affinity purification of TIGIRR; therapeutically to inhibit binding of TIGIRR to its counter structures, and (if agonistic) to promote cell signalling.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (b) to identify human chromosome X, to map genes on this chromosome and to identify disease-related genes (particularly in the region Xq21.3-22 where genes are present associated with e.g. FG syndrome, premature ovarian failure-1, leiomyomatosis, epilepsy, Bazex syndrome etc.) including detection of defective genes; (c) to study cell-signal transduction and the TIGIRR system, and (d) in gene therapy. Sense and antisense oligonucleotides derived from the TIGIRR coding sequence can be used to inhibit expression of the TIGIRR Gene. The TIGIRR protein, or its soluble fragments, are used: (i) to study cellular processes (immune regulation, proliferation, death, migration, interaction with other cells and inflammation); (ii) to identify and purify proteins that associate with TIGIRR policials and inflammation).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence encodes the human TIGIRR protein of the invention. The TIGIRR DNA sequences can be used: (a) as probes or primers for identifying nucleic acid that encodes proteins with TIGIRR activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (IMMV ) IMMUNEX CORP

                                                    This sequence encodes a interleukin-1 (IL-1) receptor-like polypeptide, designated IL-1 receptor DNAX designation 8 (IL-IRD8), of the invention. The IL-IRD8, IL-IRD9, and IL-IRD10 proteins, their fragments and muteins, also related antibodies, other binding agents and (ant) agonists are used to treat conditions associated with abnormal expression of the polypeptide or abnormal expression of, or response to, their ligands, e.g. immunological, inflammatory or morphological disorders. They may also be used to screen for binding agents (potential drugs), diagnostic reagents (to detect the proteins or their ligands) and to isolate related sequences. Antibodies may also be used to raise anti-idiotypic antibodies, as carriers for toxins, radionuclides or other therapeutic agents, and for affinity purification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  10-AUG-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to compositions and methods for affecting mammalian physiology such as morphogenesis of immune system function. The invention particularly relates to nucleic acids, proteins and antibodies which regulate development and/or the immune system. The invention also relates to antibody fragments which specifically bind to antigenic fragments of a primate interleukin (IL)-1 receptor like molecules such as IL-1 receptor DNAX designation (IL-IRD). The antibody fragments of the invention are useful to treat conditions exhibiting abnormal expression of the receptors or their ligands which typically will be immunological disorders. The present sequence is a DNA encoding human II-IRD8 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1737 BP; 566 A; 330 C; 397 G; 444 T; 0 other;

                                                                                                                                                                                                               that is encoded by a gene on the X chromosome. The sequence was cobtained by high-throughput sequencing of chromosome region Xp11, PCR and 5' RACE reactions. The invention is directed to novel, purified and isolated II-1 zeta, II-1 zeta splice variants and Xrec2 polypeptides (see AAY25297-301), the nucleic acids (see AAA27918-22) encoding such polypeptides, processes for production of recombinant forms of such polypeptides, and their uses. Xrec2 nucleic acids are used to: to express Xrec2 polypeptides; as probes to identify nucleic acids encoding proteins of the II-1 receptor family; to identify numan chromosome X; to map genes on chromosome X; to identify genes associated with diseases, syndromes, or other conditions associated with chromosome X; such as retinoschisis, lissencephaly, subcortical laminalheteropia, mental retardation, cowchock syndrome, bazex syndrome, hypertrichosis, lymphoproliferative syndrome and immunodeficiency; as single-stranded sense or antisense oligonucleotides to inhibit expression of Xrec2 polypeptides; to help detect defective genes in an individual; and for gene therapy.

                                                                                                                                                                                      The invention relates to polymucleotides (AAKS1456-AAKS3435) and the encoded polypeptides (AAM78333-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, inmunomodulatory activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

                                                                Local Similarity:
                                                                                                                                      mammalian physiology such as morphogenesis of immune system function. The invention particularly relates to nucleic acids, proteins and antibodies which regulate development and/or the immune system. The invention also relates to antibody fragments which specifically bind to antigenic fragments of a primate interleukin (IL)-1 receptor like molecules such as IL-1 receptor DNAX designation (IL-IRD). The antibody fragments of the invention are useful to treat conditions exhibiting abnormal expression of the receptors or their ligands which typically will be immunological disorders. The present sequence is a DNA encoding human IL-IRD10 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     04-DEC-2001.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            맑
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ś
                                                                                                                                                                                                                                US-08-381-603-3
                                                                                                                                                                                                                                                                                                          S
                                                                     Sequence 3, Application US/08381603
Patent No. 5858355
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Brans, Christopher H.
APPLICANT: Brans, Christopher H.
APPLICANT: Robbins, Paul D.
TITLE OF INVENTION: Gene Transfer For Treating a Connective Tissue TITLE OF INVENTION: Mammalian Host
NUMBER OF SEQUENCES: 6
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                          2039
                                                                                                                                                                                                                                                                                                                                                                                                      1988
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1851
